

## Water Recycling Program Implementation at SEUSL

### 1. Water Recycling Programs

### 2. Water Conservation - Groundwater pumping well. Used to pump groundwater (shallow) for irrigation purposes saving treated water.

#### Description:

South Eastern University of Sri Lanka uses two sources of water for irrigation, 1) treated wastewater and 2) pumped shallow groundwater. Treated wastewater generated from the wastewater treatment plant is reused for irrigation purposes and the rainwater collected and recharged to shallow groundwater table is also reused by pumping for the purpose of irrigation.
