Implementation of FAS-OLMS open source LMS will create new mode of course management and learning environment for faculty members and students. Moodle is online E-learning management system which is adopted globally by various colleges, University and other academic institute to enhance online learning. FAS-OLMS offer tools to share course material to communicate with students, forum post among students and teachers, collect assignment and manage grades. Authors aim to implement the design and development of E-learning LMS based on Moodle for FAS. This is design for category in which there are undergraduate course of study program. In this paper authors have mainly focused on how customization suitable for FAS curricular.
